Committee seeks noise ordinance changes

By GREGG SCHROEDER
Staff Writer

A Cal Poly committee formed to analyze the proposed San Luis Obispo noise ordinance met Oct. 18, according to the Associated Students, Inc. community affairs representative.

Linda Eberl said the committee was set up to make suggestions to the San Luis Obispo City Council for alterations to the proposed noise ordinance that includes the use of a decibel meter to gauge

sound levels.

Committee members include Eberl, Russ Brown, dean of students; Doug Gerard, executive dean; Laurie Caddell, president of the Panhellenic Council and Nick Athanasakos, vice president of the Inter-Fraternity Council.

Eberl said there are three parts of the ordinance the committee wants to discuss with the city council.

First, the city council said police officers would issue warnings to

those exceeding the legal noise level and would cite only after repeated infractions. However, this is not provided for in the ordinance, Eberl said.

"We want it in writing," she said.

Second, Eberl said the committee questioned the maximum decibel level allowed in the ordinance.

"Fifty to 55 decibels is unrealistic," she said.

Eberl said she used a decibel meter to test sound levels and found that "50 to 55 (decibels) was

background noise." The meter reached 62 decibels when traffic went by, she said.

"We want to work to get (the city council) to approve a more reasonable decibel level," Eberl said.

The third point the committee wants to discuss with the city council, Eberl said, concerns applications for waivers. The ordinance allows people to get special permission to exceed the legal noise level for special events, but the ordinance does not set down criteria

for how to get a permit.

"This could be subject to discrimination," Eberl said. "Who would be more likely to get a permit—a student or a businessman?"

The committee wants specific criteria included in the ordinance, Eberl said.

Committee members will present their recommendations to city officials today. Crime Prevention Officer Steve Seybold, Lt. Gary Grant, Councilman Ron Dunin and City Attorney Roger Picquet will meet with the Cal Poly committee.

English professor points out difference in types of creativity

By LEANNE ALBERTA
Staff Writer

Is there a difference between the artistic imagination and the scientific imagination?

This is the question that Professor James Engell, a member of the English Department faculty at Harvard University, pondered in his lecture titled "The Creative Imagination: A Paradigm For Science And Art."

The lecture, held Thursday morning in the University Union, was the second presentation in the 1984-85 arts and humanities series titled "Imagining the Imagination."

Engell's talk focused on the birth of the idea of the creative imagination in the 18th-century Enlightenment and the tension between the scientific culture and the artistic culture.

"In the late 17th and early 18th centuries imagination increased in importance," Engell explained. "Even then there was a separation between science and the arts. The sciences dealt with the manipula-

tion of matter, and the arts dealt with the intricacies of humanism."

"At Harvard the scientists were always called nerds and 'winks' and the artists were perceived as self-indulgent," Engell added.

These types of perceptions and separationist attitudes are common in colleges and frequently hinder good learning conditions.

Scientist and author Francis Bacon believed that a college should not be like a house with walls that separate, but rather like a body in which arteries connect every part.

However, the educational system in the United States has not been very successful in attempts to break barriers between the arts and sciences. Efforts to cultivate imagination in United States schools have also met with disappointment.

"The curriculums in our universities are too concrete," Engell explained. "College students commonly don't realize that the outside world is not as compartmentalized — they have to work with people of all different majors."

James Engell, an English professor from Harvard University, pondered the differences of artistic and scientific creativity in a lecture last Thursday.

Engell believes that it may be impossible to heighten imagination

in schools. "Imagination is very elusive and very hard to methodize," Engell said, "and even if imagination could be methodized, the sheer act of making it a process would render it stale — it would no

longer be imagination."

Engell also feels that computers can aid imagination. "Computers are a kind of Pandora's Box," Engell mused. "It depends on who uses computers and how they are used. I believe that computers have and will fundamentally change the

way we live and that's not necessarily bad."

"In the Enlightenment people created the age in which they lived," Engell went on. "They asked large arching questions. Perhaps the key to imagination lies in questioning."

Student comes up with theme; names Poly Royal for third time

By KIM MILLER
Staff Writer

The Cal Poly student who has picked the winning theme for Poly Royal for the past two years submitted another winning entry in the 1985 Poly Royal theme contest.

Dave Mason, 19, brainstormed his way to "Minds in Motion," the theme for Cal Poly's 53rd open house.

Poly Royal Board spokesman Jim Low, said, "The theme is chosen by something that is creative and shows some imagination. It has to be something all the departments can conform to."

Low said that about 75 entries were submitted, and Mason said that he entered five himself.

Mason's reward for clever tongue twists is dinner for two at the Assembly Line restaurant. "I don't have a girlfriend this year, so the other dinner is up for grabs," he laughed.

Mason's 1983 entry "Excellence through Experience" and 1984's "Portrait of Progress" earned him similar prizes. Will Mason try again next year? "Of course, I need

Mustang Daily — Stephanie Pingel

Poly student Dave Mason is the three time winner of the Poly Royal theme contest.

those free dinners. After all, I'm a student," he said.

It takes just the right timing to produce one of Mason's winners. "Last year I said that I'd start writing down all my ideas for this year. The only idea I wrote down was 'Developments on Display' and that was just terrible," he said. "It sounded so Disneyland."

"And then Saturday night at 12:30 a.m. (the entries were due on Monday) I was listening to Mason Williams and I came up with 'Advancement in Action.'" Mason said he played around with that idea until he came up with the winning "Minds in Motion."

"Mason Williams can really do things for you," he added.

Aside from picking Poly Royal themes, Mason coordinated the chemistry department's display last year during the two day gala. Majoring in chemistry, he is also the treasurer of the American Chemical Society.

On his less serious side, Mason is a disc jockey at KCPR, although he swears he only plays soundtracks no punk.

Sign change may reflect easing of alcohol policy

By DONALD MUNRO
Staff Writer

Cal Poly is still very much a "dry" campus. Alcoholic beverages are not allowed, but the policy has been getting more liberal in the past few years.

Signs on campus used to inform the public that no alcoholic beverages were allowed. But the sign at Mustang Stadium was recently changed to say that alcohol is not allowed without "prior administrative approval."

Although the sign was recently changed, it reflects a policy that has been in effect for several years, said Larry Voss, executive assistant to Cal Poly President Warren Baker.

"That's been a policy as far as administrative approval for three or four years now," Voss said.

Although the sign is located at the stadium, it doesn't mean that alcohol may be consumed there.

"There's absolutely no alcohol allowed in the stadium," Voss said.

The practice of allowing alcohol with administrative approval is specified in the Campus Administrative Manual, said Voss. In

the manual, the campus alcohol policy states that possession or consumption of alcoholic beverages on campus is prohibited.

Exceptions may be granted by the president to allow service of alcoholic beverages under established guidelines, the manual states. Factors to be considered include the nature of the event, the sponsoring organization, age of the participants, the adequacy of supervision and the benefit of the event to the university.

Meetings, workshops and receptions on campus are among the events where it may be possible to serve alcohol, Voss said.

Some events that have benefitted from the change of policy are the tailgate parties sponsored by the Mustang Boosters that are held before home football games. Voss said this is the first year that tailgate parties where alcohol may be served have been allowed.

"It's a one-year approval to determine if the program works out," Voss said. "We want to be sure that the tailgaters are handled properly."

Please see ALCOHOL, page 3

Exclusive tailgating drowns spirits

President Baker, you left something out of our homecoming celebration this weekend.

The students.

You invited alumni from as many as 50 years back to a pre-game tailgate party in Poly grove with Mustang Boosters — a party complete with barbecue, beer and band.

The Boosters recently got the administration's permission to hold tailgate parties. The idea, said Athletic Development Director Deny Martindale, is to *promote school spirit*.

Martindale told the *Mustang Daily* the tailgate parties are in a trial year, and are limited to Booster members and their guests.

"The Boosters hope to expand the parties in future years to include alumni and possibly students," Martindale said in an Oct. 1 article.

Possibly students? In the future?

President Baker, what are you waiting for?

It is understandable that you would like to test the success of

such parties, which are traditional events at UC Berkeley, Stanford and USC. But face it, you aren't testing it fairly.

Scientists know making an experiment's results accurate requires testing all possible variables, all who might be affected.

What you are saying, in effect, is that students could never prove themselves responsible.

And what the administration has done, and continues to do, is alienate students, who are supposed to be its main concern.

What is supposed to raise school spirit for football games will instead crush it. What is supposed to be a trial of responsibility will result in a meaningless, exclusive event.

For it excludes from your "spirit raising activities" future Cal Poly Boosters — students. You will turn them off to supporting the university in *future years*.

Consider Cal Poly's future, President Baker, by respecting the present. Experiment fairly.

Prop 39: its long-term changes

Proposition 39 on the November ballot could one the most important issue to face Californians for years. Having just graduated from college myself, I am concerned that students may write off Proposition 39 as just political squabbling. Most of the clamor on both sides will be heavily financed by politicians and special interests, all seeking to advance their own short-term political goals. California voters will need to be conscious of the interests involved in this highly visible, highly partisan fight for control of the state legislature and the state's Congressional delegation.

But there is *much* more at stake with Proposition 39 than just which party will gain seats and which will lose. Students and other young people, who will have to live with the long-term effects of Proposition 39, need to look beyond the short-sighted political gains and losses to the permanent, structural changes that the measure will make in the reapportionment process and in the state's judiciary.

The big claim of the proponents of Proposition 39 is that it will take the politics out of reapportionment. That is absurd. Reapportionment is politics, no matter who does it. A commission of retired judges, such as that set up by Proposition 39, would be subject to all the same pressures as the legislature is now. It is nice to think that after serving as impartial jurists these retired judges will behave perfectly impartially as redistricting commissioners, but in reality we need to recognize that they are people, too. They have their own political views, leanings and allegiances.

If we pretend that we have removed the politics from the reapportionment process, we fall into the seductive trap of Proposition 39. Far from removing the politics, Proposition 39 would hide them behind closed doors. Whereas the present legislative redistricting process allows for public input, referenda on the reapportionment plans and voting against legislators who act against their constituents' wishes, *all* these avenues are closed by Proposition 39.

There is no doubt that politicians and special interests will still have their input into the process. Whether others will have their say is questionable. The pool from which commissioners will be drawn contains *no* women, almost no minorities, and no one under the age of 58 (the average age is 74!).

In order to guarantee the fairness of the reapportionment process, it is imperative that the public be able to express its views and have them reflected in the reapportionment plan.

Even more important than the distortion of the reapportionment process, though, is one of the side effects of Proposition 39. In a futile attempt to flush politics out of redistricting, Proposition 39

will inject politics into the state judiciary.

It is widely believed that because appellate court judges are appointed by the governor, they must all be the governor's political cronies. An examination of recent history proves that such is not the case. All recent California governors, including George Deukmejian, Ronald Reagan and both of the Browns appointed member if the opposing party to the appellate court *because they were qualified*.

Qualification should be the consideration for judicial appointments, not party loyalty. Should Proposition 39 pass, however, California governors will have to make their judicial choices with the knowledge that these judges will become part of the process that partitions political party power. California's appellate courts have always been among the best and fairest in the nation, largely because they are non-partisan. Is it really worth tainting the entire California judicial system in an attempt to "remove" politics from reapportionment?

Redistricting is mandated by the state Constitution once every ten years. This is a compromise between the need to maintain fair and equal districts and the need to keep reapportionment from taking up all our time. Passage of Proposition 39 would require *another* reapportionment in 1986, meaning the fourth set of different districts used this decade.

The current reapportionment process may not seem ideal, *but it works*. Many Californians objected to the original redistricting plan approved by the governor and the legislature in 1981, and in June of 1982 a statewide referendum rejected that plan. New plans were subsequently drawn up and approved with bipartisan support.

Recognizing that the current system works, California voters rejected a proposal to create a reapportionment commission in November of 1982. That commission was much more fair, and would not have politicized the judiciary. It included members of both parties, and assured representation of women and minorities. Yet Californians rejected that proposal by a comfortable margin.

Proposition 39 is a short-sighted partisan political ploy. Its legacy, regardless of short-term winners and losers, will be backroom reapportionment and a politicized judiciary. A "NO" vote on Proposition 39 on November 6 will preserve a political process that protects the rights of everyone, and will keep the justice in our judiciary.

Guest opinion author Richard L. Nelson is a 1984 UC Berkeley graduate, now working in Washington, D.C.

New fraternities started at Poly

By MICHAEL STUMP
Staff Writer

Two more fraternities may be initiated into the Inter-Fraternity Council by the end of the quarter, said Walt Lambert, coordinator of Greek affairs.

Beta Theta Pi and Sigma Nu have petitioned to be formally recognized by IFC.

"An expansion committee has been formed," said Nick Athanasakos, IFC vice president. "Right now we're getting ideas from other schools. Until policy is made, they will not be recognized in IFC." There are currently 11 fraternities officially recognized.

Beta Theta Pi was formed Spring Quarter by Bruce Dankburg who transferred from Arizona State University. Two other active members assisted: Frank Chin and George Muggee, both from the

University of California at Irvine.

The Betas started with nine charter members and now have nine pledges. They also picked up another active member this quarter, making a total of 19 members.

"We're not looking for numbers," said Dankburg. "But by next year we would like to be in the 50 to 70 range."

Beta Theta Pi is an international fraternity with chapters in Canada. There are reports of expanding into Mexico and Europe, according to Dankburg.

"We are the oldest fraternity still in existence," Dankburg said. "We were founded Aug. 8, 1839, and we are the oldest fraternity on forty campuses."

Some prominent members include Secretary of State George P. Shultz, George Peppard of the A

Team, and Adam West from Batman.

Sigma Nu was started this quarter by U.C. Santa Barbara transfer Dennis Klum. He also started the chapter at Santa Barbara.

"National will give us a charter as soon as we are formally accepted into IFC," said Klum.

Fall rush was to acquire charter members, said Klum. They now have 18. Spring rush will be the first official pledge program.

"Our policy is quality not quantity," said Klum.

In about a year Sigma Nu hopes to have a house. Klum is optimistic about getting a loan from the National Organization.

"Nationally we're the seventh largest fraternity, as far as active chapters and number of members," said Klum.

About 750 people, including members of Mustang Boosters and members of the Alumni Association, attended the tailgate party held before the homecoming football game Saturday night, said Denny Martindale, associate athletic director.

"It turned out really well," said Martindale.

The purpose of the tailgate parties is to provide a social atmosphere that will draw fans to the football games. "It's a promotion tool to get people in the stadium," he said.

In order to attend the tailgate party, a person must be a member of the Mustang Boosters, cannot be currently enrolled as a student, and must be over 21, he said.

Martindale added that security guards are on duty to monitor the situation and make sure people don't try to crash the party.

There wasn't a problem Saturday night as far as students trying to attend the party, Martindale said. "We're thankful that the students are being understanding," he said.

In future years, there may be a possibility that students could attend tailgate parties, but that would require an administrative decision, Martindale said.

Bell says higher education system sick

WASHINGTON (AP) — Education Secretary T.H. Bell said Monday a critique by a team of scholars shows "American higher education has the sniffles" and needs to take precautions to avoid getting "a bad cold or even pneumonia."

But Bell said the verdict rendered by the scholars was less harsh than he had anticipated, and he stressed that colleges were not in as much difficulty as the nation's elementary and secondary schools.

"Educational institutions are a bit like people: they can grow old and top out and go to seed if they don't renew and reinvigorate themselves periodically," he told reporters at a news conference at George Washington University.

Among the recommendations in the report, "Involvement in Learning: Realizing the Potential of American Higher Education," are that colleges devote more resources to teaching and advising freshmen and sophomores; that they make students pass proficiency tests, not merely acquire course credits, to get a degree; and that all students take at least two years of liberal arts courses, even if that forces them to extend their stay on campus beyond four years.

The presidents of five major higher education

groups issued a statement applauding the study and expressing hope it would stir up as much interest as "A Nation At Risk," the study on high schools by a Bell commission last year.

But they also said the report slighted adult learners and gave the false impression "that all of higher education is composed of 18-21-year-olds all pursuing a baccalaureate degree." They also took issue with the report's statement that only half the students who start college aiming for a bachelor's degree "actually attain this goal." The American Council on Education said its statistics show that 65 percent of freshmen complete the degree within five years and 75 percent after 10 years.

The criticism came from the heads of the council, the American Association of State Colleges and Universities, the National Association of Independent Colleges and Universities, the Association of American Colleges and the American Association of Community and Junior Colleges.

The Associated Press disclosed the report's recommendations last week. Bell's National Institute of Education commissioned the study by a seven-member panel of experts on academe.

Fraternity house fire kills one member

BLOOMINGTON, Ind. (AP) — A pre-dawn blaze roared through an Indiana University fraternity house Sunday, killing one person and injuring 34 others during homecoming weekend, and authorities suspect the fire was deliberately set.

Israel D. Edelman, 19, a student at the school's campus at Richmond, Ind., and a guest at the Zeta Beta Tau fraternity house, was pronounced dead on arrival at Bloomington Hospital. Deputy Monroe County Coroner Dr. Tony Pizzo said Edelman died of smoke inhalation.

Monroe County Prosecutor Ron Waicukauski said he was investigating Edelman's death as a murder.

"It appears to have been a set fire," Waicukauski said.

Some type of flammable liquid had been poured in

the living room of the house, located a block from the main campus, said James Skaggs, chief investigator with the Indiana fire marshal's office.

Four fraternity members were hospitalized, three with second-degree burns and smoke inhalation, and the other with wrist and back fractures and smoke inhalation, said an emergency room nurse who refused to give her name. Thirty other people, including two campus policemen, were treated for smoke inhalation, abrasions and fractures, the nurse said.

The fire started about 4 a.m. in the living room of the three-story, limestone structure, said James Kennedy, director of the university's police department.

Stanford receives Steinbeck collection

STANFORD, Calif. (AP) — A small selection of early, unpublished material by author John Steinbeck has been acquired by Stanford University for its collection, campus officials said today.

The material, obtained from a Los Angeles book dealer through the Charlotte Ashley Felton Memorial Fund, includes an untitled short story and seven letters to a former girlfriend, all dating from 1925-26. It is to be deposited in the university's Cecil H. Green Library.

Steinbeck attended Stanford but left before get-

ting his bachelor's degree to eventually pursue a writing career.

Stanford said the author's letters, written to Margaret Gemmell, describe his loneliness in New York, and go into detail about many people he found fascinating. One of the characterizations found its way into the celebrated novel, Cannery Row, the university said.

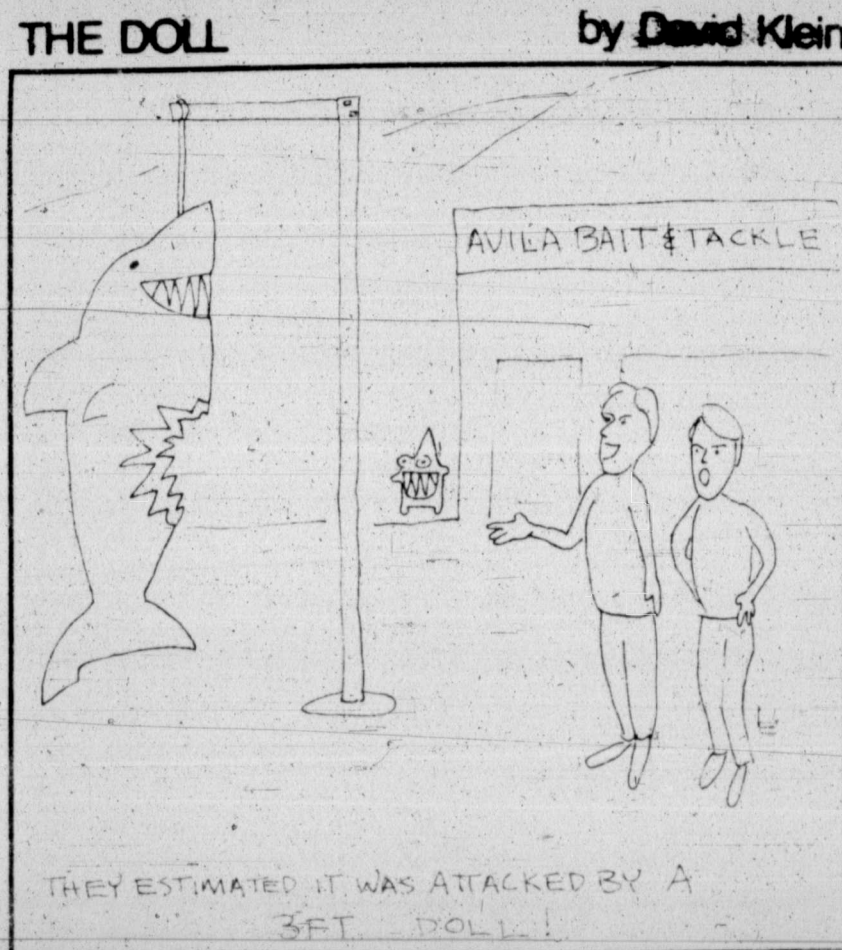

The material is to be made available to scholars in the library's Department of Special Collections, the university said.

Deukmejian, McCarthy disagree over who won presidential debate

SACRAMENTO (AP)—California's top Republican and Democrat—Gov. George Deukmejian and Lt. Gov. Leo McCarthy—disagree sharply over who won the final presidential debate Sunday between Walter Mondale and Ronald Reagan.

Deukmejian, who gave Reagan a lukewarm edge in the first debate, claimed Reagan was the clear-cut winner the second time around. McCarthy said Mondale won the second encounter, but he said

Reagan's performance was better than in the first debate and that the president looked "less tired" than Mondale.

"I couldn't be happier," the Republican governor told reporters after watching the debate at a supporter's home in Los Angeles. "I think he (Reagan) absolutely secured his re-election tonight."

Deukmejian said it was "unfortunate" that Reagan's closing statement ran too long and was cut

off, but he doubted that damaged Reagan's performance.

He said that Reagan had underscored his commitment to "arms control and also the total elimination of the use of nuclear weapons."

Deukmejian predicted that Reagan would either maintain or increase his lead in the polls, but McCarthy said Mondale would continue to close the gap.

"I believe the race continues to

tighten up," McCarthy said. "I think the president should have bounced back. The president should have been dominant tonight. Clearly he was not."

that advised Nicaraguan rebels to use terrorist tactics.

"He also handled the embassy bombing in Lebanon poorly."

The Democratic lieutenant governor said Mondale had "an edge" in the 90-minute encounter. "It was not the decisive edge of the first debate but I think he had an edge," McCarthy said, contending that Reagan looked "particularly confused" in discussing a CIA manual

Deukmejian also disagreed with Reagan's overly long closing statement. "The American people are used to seeing a totally confident Ronald Reagan speaking. The president should have used his closing tonight to show that (he is) in control."

Mondale must campaign in large states

Commentary

KANSAS CITY, Mo. (AP)—By any reasonable standard, Walter F. Mondale did about as well he could have expected in his two debates with President Reagan, but now the Democratic challenger will find out if that was enough to close the gap in the presidential race.

From now until Nov. 6, Mondale will chase the electoral votes he needs to to upset the president. That is likely to keep the challenger in the nation's largest states and talking about the themes he stressed in the second debate—competence, leadership and foreign policy.

"We are solidly on the foreign policy course," Mondale campaign chairman James Johnson told reporters in a post-debate briefing on Monday.

Although Johnson denied that foreign policy would be the exclusive topic of Mondale's last two campaign weeks, don't expect the candidate to spend much time talking about his plan to raise taxes or stressing fairness, an issue that worked for the Democrats in the recession election of 1982 but has proven less effective during this recovery year.

It is ironic that Mondale, perceived by most observers as the winner of the domestic policy debate, should close his campaign dependent more heavily on the issues of the foreign policy confrontation.

Mondale's strong performance in the first debate coupled with Reagan's subpar showing gave the Democratic a desperately needed boost. In their second debate, Reagan was back in form and Mondale also was strong.

The initial polls done Sunday night gave the president a statistically insignificant edge and a panel of debate judges said Mondale was the clear winner.

As he left his hotel, Mondale offered his rating of the president's performance: "In one sense, he didn't do as poorly as he did last time. But, on the central question of command, knowledge, of taking responsibility, I think he did worse."

"When this record is debated over the next two weeks," the candidate said, "it's clear he didn't know what a president must know, he didn't take responsibility where a president must. And, when things went wrong, he tried to run away from them."

Johnson and Mondale campaign manager Robert G. Bechel were confronting the polls and the perception that even many people who agree with Mondale on issues intend to support Reagan for re-election.

Although some polls say Reagan leads by margins ranging as high as 25 points, Bechel said surveys done by Peter Hart, the Mondale campaign pollster, show the gap closer to 9 points.

But Bechel did suggest one aspect of the national polls that is valid: presidential elections are decided state by state, not by the national popular vote. If Mondale carries the largest states by slender margins and Reagan wins the smallest by landslides it's possible the president would get a majority of the popular vote and Mondale would win the election, he said.

EDITOR'S NOTE—Donald M. Rothberg is the chief political writer for The Associated Press.

Manual: 'neutralize' Nicaragua officials

WASHINGTON (AP)—The CIA told the Senate Intelligence Committee on Monday that all copies of a CIA-written psychological warfare manual for Nicaraguan rebels contained language on "neutralization" of government officials, a panel member said.

After a three-hour briefing, Sen. Sam Nunn, D-Ga., said that while some deletions were made in the 90-page manual, "the term 'neutralization' was in all the documents."

During the presidential debate Sunday night, President Reagan said CIA officials had deleted a number of pages that dealt with assassination of Nicaraguan government officials, although adding that 12 copies of an original with such references "some way ... got out down there."

Nunn and Sen. Malcolm Wallop, R-Wyo., were the only two committee members who attended the CIA briefing, which the Georgia senator said was handled "by people who were new ... and not by people who presumably would know the most about this operation."

Wallop and Nunn also said the CIA's internal investigation into the production of the manual was continuing and that many questions remained. Wallop said he saw no indication of "footdragging," adding that tracing the decision-making process on the manual involved "a complicated paper trail."

But on the key question of whether the CIA-produced manual encouraged assassinations, Nunn said:

"There were deletions before some printings were made and before some distribution was made, but all of the documents presumably ... had some of what

would be called questionable to some and to others offensive language, including language relating to so-called 'neutralization.'"

Nunn's description of the CIA's briefing appeared to support an account from Edgar Chamorro, propaganda chief for the Nicaraguan Democratic Force, who said that deletions were made in the original manual to remove references to hiring professional criminals for "selective jobs" and creating a "martyr" by arranging the death of a rebel supporter.

But Chamorro said the revised manual still contained advice on the "selective use of violence" to "neutralize" Nicaraguan government officials and on coercing Nicaraguans into carrying out assignments against their will.

In an interview with The Associated Press on Saturday, Chamorro said about 200 copies of the original manual were distributed although most were later recalled. He said about 2,000 copies of the second version were sent to rebels fighting Nicaragua's leftist government.

At the debate, Reagan said the original manual was the work of a CIA contract employee in Central America, but that when it was turned over to his CIA superior, "a number of pages were excised by that agency head there ... and he sent it on up here to CIA, where more pages were excised before it was printed."

Reagan said the CIA official in charge in Central America had "recognized that what was in that manual was direct contravention of my own executive order in December 1981 that we would have nothing to do with regard to political assassinations."

VETERAN'S MEMORIAL HALL

Kaptain Kilowatt monitors dorm contests

By LISA LONG

Staff Writer

It's a bird! It's a plane! No! It's Kaptain Kilowatt and his Dog Energy. The Kaptain and his dog were sent to Cal Poly to save kilowatts for Pacific Gas and Electric Co.

The Kaptain and his Dog serve as mascots for the Cal Poly dorm energy conservation program. PG&E has sponsored energy-saving contests between residence halls for the last five years.

"The contests keep housing costs down," said PG&E campus representative Rick Draeger. The junior civil engineering major works with Susan Pockrandt, a junior liberal studies major. The two campus representatives are in charge of implementing the fifth annual dorm energy conservation competition.

"Last year's savers are benefiting this year," said Draeger. This is because the housing coordinators look at the energy costs of the previous year before deciding future housing costs, he said.

"It's definitely cost effective," said Draeger. The program has saved \$80,000 for PG&E, he said.

Campus housing is divided into four sections for the competition. Division One consists of Yosemite and Sierra Madre dorms, and the red brick dorms comprise Division Two. Division Three is the North Mountain dorms with washers and dryers, and Division Four is the North Mountain dorms without washers and dryers.

Each dorm elects energy representatives to be the connection between PG&E and dorm residents. The red brick dorms elect two interns each and the North Mountain

dorms have one intern each. Yosemite and Sierra Madre elect a vice-president who also serves as an energy intern. The size of housing units decides the number of interns each unit will have.

Energy interns meet with the campus representatives once a month. Their goal is to "activate and stimulate" the dorm populations, said Draeger. The interns run the contests in their dorms.

Trinity Hall energy intern Debbie White thinks the competition allows residents "to save energy in a fun way." The 18-year-old freshman biological science major expects the job to be "challenging" and a good way to get involved with her dorm.

The energy contest runs from October to March, excluding December when the dorms are virtually vacant.

Each month a different theme guides the competition. For the month of October each dorm displays a graph and bulletin board in the main lounge. Entries are judged by PG&E representatives and members of the faculty, such as the dean of students. First place gets \$20, second place receives \$10 and every dorm gets \$10 just for participating.

November is energy conservation tip month. Dorm residents are asked to sign a commitment to saving energy and write energy saving suggestions. The dorm that turns in the most tips wins \$25. Second place gets \$20 and third place gets \$15.

Energy posters lead the competition in January. First place gets \$25, second gets \$20 and third gets \$15.

February is phantom phone call month. First, every hall decides on a slogan. Then campus representatives will call the dorms and ask residents for their slogans. The

dorm with the most correct answers receives \$30, second gets \$25 and third gets \$20.

March is "greatest reduction month." Base year figures are constituted from 1978, 1979 and 1980. The dorm that saves the greatest amounts of energy in comparison to previous figures is the final winner in the energy competition.

Final dorm standings are announced at an awards banquet in April.

Cal Poly computers lure Litton

By SUSAN DETHLEFSEN

Staff Writer

Computer specialists and engineers from all over the world will be gathering at Cal Poly Oct. 31 - Nov. 2 for a high-tech conference.

Litton, a company that makes everything from microwave ovens to navigation systems for the government, will hold its annual international convention here because of its interest in Cal Poly's Computer-Aided Design and Manufacturing (CAD/CAM) program.

"I feel sorry for students in other universities who don't get an opportunity to work on a system like this before they go into the real world of designed and manufactured products."

-Mark Cooper, director

CAD/CAM is a computer system that allows engineers to design, display and test a product on a computer instead of using a pencil and drawing board, said Mark Cooper, the Computer-Aided Productivity Center director. It is a technology area that is having a major impact on the way companies design and manufacture products, he added.

For example, Cooper said, if someone wanted to design a pen, they could create an image of it in the

mind of the computer — it wouldn't just be a picture on a piece of paper. This enables the computer to analyze and test the product before the company builds a prototype of it, which saves money.

Cal Poly is the first of the 19 California State Universities to get a major CAD/CAM system and use it, Cooper said. So far, over 1,000 students have used the system for design purposes and over 65 faculty members have experimented with it.

"I feel sorry for students in other universities who don't get an opportunity to work on a system like this before they go into the real world of designed and manufactured products," said Cooper after explaining that virtually every major industrial enterprise has a CAD/CAM system.

Cooper said the purpose of the convention, which has been held on the East Coast for the last couple of years, is to gather key people in Litton's CAD/CAM area so they can talk, and share information and problems they encounter.

"The primary reason we invited them here is we thought it would be helpful for students to see how a major corporation solves problems," Cooper said. He added that he wants to have the sessions open to students and faculty and he wants them to have an opportunity to talk to the Litton people and ask questions.

He said Litton gave Cal Poly a \$10,000 grant in 1982 and \$2,000 in 1983 to assist the Computer-Aided Manufacturing program because they felt Cal Poly was trying to do something significant without enough resources.

Presently, the program has eight terminals. But with a recent grant from IBM, over 12 more will be installed — including eight new color terminals.

Tie takes its toll, kickers can't come back

Tying Chapman 0-0 on Friday night wears out Mustangs for Saturday

Cal Poly men's soccer team tied Chapman College 0-0 in an overtime match Friday night in Orange, and then lost a 1-0 game in Carson on Saturday to Dominguez Hills.

In the Friday game, the Mustangs had "good scoring opportunities," said head coach Wolfgang Gartner, "but the good play of the Chapman defense prevented any scores."

Don Aguiar, Eric Crozier and Dave Pai played good defense, said Gartner. He added "solid midfield play created some good scoring opportunities."

The game was "physically demanding," said Gartner.

On Saturday the Mustangs

allowed a goal in the second minute of the game and had offensive problems which have inhibited their offense for the past three games with Dominguez Hills. In the last three games, Cal Poly has lost 0-1, 0-1 and tied 0-0.

Gartner called the win lucky for the Toros. His team was "exhausted from the tough match the night before," he said. "But put up a tremendous effort, dominating the Toros throughout the match."

The Mustangs' record drops to 3-4-2 in California Collegiate Athletic Association play and 5-7-3 overall.

The soccer team will be at home in Mustang Stadium, Friday night, 7:30 p.m. against Cal Poly Pomona.

Mustang Daily — Dave Diehl

Action from the soccer matches two pointing weekend, losing one game on the weekends ago. The soccer team had a disap- road and tying another.

New breed of players in colleges

Soccer changing the face of sport

Coaches in almost every sport in America has had to face the problem.

Ten years ago most children played baseball or football, but today more and more play soccer.

In colleges throughout the nation the quality of soccer has improved as these children get older, and Poly's head soccer coach says this year he has the most consistently talented players.

"There are so many good players" at the college level said Wolfgang Gartner. "Now (soccer players) they have played since they were six years old."

Gartner grew up in Europe and has played soccer all over the world. He is in his fifth year as head coach at Poly and has been watching American soccer first hand for eight years.

He took over the Mustang job as a volunteer job five years while an injury sustained in professional soccer healed, and the job grew into a permanent coaching position.

Soccer in America is changing rapidly, he said, but the one thing that hasn't changed is the media's coverage of his sport. "The media doesn't want to spend the money to cover it adequately," said Gartner.

The media are ignorant of the sport, said Gartner, and don't understand it. But he added that as more and more children grow up to be soccer fans, the media will be forced to cover the sport adequately.

The Mustangs No. 1 offensive player, Jeff Meyer, is one such example.

"I tried everything," said Meyer of other sports when he was young. "Now all I do is play soccer."

Meyer is in his 12th year of playing soccer and Gartner said Meyer is an example of a player that could have played any sport, but chose soccer.

Cal Poly's engineering program wasn't the only reason he decided to come here, said Meyer. "I came to this school because it had a good soccer program."

Meyer said he hopes to possibly play professional soccer one day.

"I'd like to finish school," he added, to have "something to fall back on."

Gartner said he is proud of the team he has built to Cal Poly, but added that he has to compete against schools which give scholarship to soccer players.

"People should appreciate we are bringing a good team here," said Gartner.

Top 3 teams still perfect

How the Associated Press Top Twenty college football teams fared:

- No. 1, Washington (7-0-0) beat Oregon 17-10, Saturday.
- Arizona (4-3-0), Saturday.
- No. 2, Oklahoma (5-0-1) beat Iowa State 21-10, Saturday.
- Next: at Kansas (2-5-0), Saturday.
- No. 3, Texas (4-0-1) beat Arkansas 24-10, Saturday.
- Southern Methodist (4-1-0), Saturday.
- No. 4, Boston College (4-1-0) lost to West Virginia 21-20, Saturday.
- Next: Rutgers (5-2-0), Saturday.

Mustang Daily — Stephanie Pingel

Jeff Meyer is the leading scorer this year for the Cal Poly soccer team. Meyer and teammates are an example of the effect of youth soccer leagues have had on the quality of play in collegiate soccer.
